The Almanack Explained.

IN every Month are 6 columns, the first shews the daies of the Month, the second the daies of the Week, the third is the Feasts both fixed and moveable, the time of the Suns rising and setting, and length of Day, the fourth shews the Sign, the fifth the time of high water at *London*-Bridge, and the last shews the time of the Moons rising and setting, namely, her rising from the New Moon to the Full Moon, and her setting from the Full Moon to the New Moon, as in the ALMANACK may be seen.

Of the Eclipses this Year.

THere will be three Eclipses this present year, one of the Sun, and two of the Moon, whereof the end of the last of the Moon will only be seen in *England*.

The Eclipse of the Moon hapneth on *Wednesday* the 20 of *November* in the afternoon.

The beginning and middle of this great Eclipse cannot be seen of us, but the end is at 40 min. past 4 a clock at night, at which time the Moon is near three quarters of an hour high in the *North East*, so that (if clouds hinder not) we may observe the end thereof: But in *Denmark*, *Sweden*, *Russia*, *Germany*, and *Italy*, a great part of it may be seen; and in *Muscovia*, *Tartaria*, *Arabia*, and the more *Eastern* parts, it will be all visible.
